WORK EXPERIENCE

Full-Stack Developer

Mississippi Coding Academies

📅 2021 - 2022 📍 Biloxi, Ms

- **Bing-map api** - Designed and developed a map web application that can search for points of interests, display results, display their position on the map, and display directions. The main tasks were to fetch location data from the API and retrieve directions to a point of interest.
- **Media player** - Collaborated with a team of 5 other developers to create a media player web application. My role mainly consisted of the functionality of the players controls. I handled the backend of all of the buttons, and video/audio sliders. Gained knowledge of DOM Manipulation, event listeners, and arrow functions.
- **Check The Weather** - Developed a program using the National Weather Service API that populates textboxes with the users current latitude and longitude to display information about the weather. Gained knowledge of geolocation and using API's. .
- **Tic-Tac-Toe** - Developed a tic-tac-toe game In c-sharp. The main tasks were Input validation for players, and working with 2-Dimensional arrays to determine win conditions.

- Supervise a staff of 10-15 people and manage daily average sales of \$10,000-\$15,000.
- Work with managers to assess employee performance and provide training if necessary.
- Manage opening and closing shifts throughout the week and the responsibilities that came with it.

CAREER SUMMARY

Proven and hard-working junior software developer with 1 year of experience. My passion is creating clean and scalable code with cutting-edge technologies. I am eager to solve creative problems and build software solutions for end users.
